The present document was prepared as part of the workshop *Introducing a ‘Digital Health’ focus to health research: why it matters to ECRs?*, which was organised in September, 2019, by the Care Informatics and Technologies - a project enabled by funds of the University Strategic Fund, in the College of Nursing and Health Sciences in Flinders University, South Australia.

In order to inform early career researchers, we listed references and resources that might be useful for those with little or no experience in research in Digital Health. We classified these resources according to their main topic in:

1. Research methods/study designs
2. Design/development of Digital Health interventions
3. Evaluation of Digital Health interventions
4. Implementation of Digital Health interventions
5. Ethics and regulation

This list is not exhaustive and you can find useful information for Digital Health research in dedicated journals such as Implementation Science, Journal of Medical Internet Research, and the Journal of the American Medical Informatics Association.

*Care Informatics and Technologies team*
SUMMARY

1. Research methods and study designs that might be useful in Digital Health .......... 3

2. Design/development of Digital Health interventions ........................................ 5

3. Evaluation of Digital Health Interventions ...................................................... 6

4. Implementation of Digital Health interventions .............................................. 8

5. Ethics and regulation for Digital Health interventions ..................................... 9
1. RESEARCH METHODS AND STUDY DESIGNS THAT MIGHT BE USEFUL IN DIGITAL HEALTH
